TITLE OF INVENTION: DNA sequence coding for a protein
TITLE OF INVENTION: of A, thaliana having a delta-5,7 sterol,delta-7
TITLE OF INVENTION: process, strains of transformed yeasts, uses.
NUMBER OF SEQUENCES: 31
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM FC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0.5%; Score 10.8; DB 1; Length 15; 85.7%; Pred. Patent No. 5830653

GENERAL INFORMATION:
APPLICANT: RACHER, BRIAN
APPLICANT: WATTENCE!, WARK
APPLICANT: ONES, ROBERT J.
APPLICANT: OUTLESREZ, ANDLD J.
APPLICANT: PUDLO, JEFF
TITLE OF INVENTION: ENHANCED TRIPLE-HELIX AND DOUBLE-HELIX
TITLE OF INVENTION: FORMATION WITH OLIGOMERS CONTAINING MODIFIED PYRIMIDINES
NUMBER OF SEQUENCES: 53
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 0.5%; Score 10.8; DB 1; Length 15; Best Local Similarity 85.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NESOUR 528

US-08-183-202-28

Sequence 28, Application US/08783202

Patent No. 5898881

Taria of Invention: DNA sequence coding for a protein of A.

TILLE OF INVENTION: thaliana having a delta-5,7 sterol delta-7 reductase

TILLE OF INVENTION: of transformed yeasts, uses.

TILLE OF INVENTION: of transformed yeasts, uses.

TILLE OF INVENTION: of transformed yeasts, uses.

NUMBER OF SEQUENCES: 31

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30 (BPO)

CURRENT APPLICATION DATA: US/08/783,202

FILING DATE:

CLASSIFICATION: 435

PRIOR APPLICATION DATA:

APPLICATION NUMBER: FR 9501723
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                           DNA sequence coding for a protein of A. thaliana having a delta-5,7 sterol, delta-7 reductase activity, delta7-Red protein, production process, strains of transformed yeasts, uses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Sequence 23, Application US/09400502

Patent No. 644127

GENERAL INFORMATION:

APPLICANT: Lin, Kuei-Ying

APPLICANT: Matteucci, Mark D.

TITLE OF INVENTION: Pyrimidine Derivatives For Labeled Binding Partners

FILE REFERENCE: 6150127

CURRENT APPLICATION NUMBER: US/09/400,502

CURRENT PILING DATE: 1999-09-21

PRIOR APPLICATION NUMBER: 08/966,392

NUMBER OF SEQ ID NOS: 25

NUMBER OF SEQ ID NOS: 25

SOFTWARE: PatentIn version 3:1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 570

US-09-456-773-4

i Sequence 4, Application US/09456773

patent No. 6441152

i GENERAL INFORMATION:

APPLICANT: Hyldig-Nielsen, Jens J

APPLICANT: Fiandaca, Mark J

APPLICANT: Fiandaca, Mark J

APPLICANT: Fiandaca, Mark J

TITLE OF INVENTION: Methods, Kits and Compositions For The Identification Of

TITLE OF INVENTION: Mucleic Acids Electrostatically Bound To Matrices

FILE REFERENCE: BP9807US

CURRENT APPLICATION NUMBER: US/09/456,773

CURRENT FILING DATE: 1999-12-08

EARLIER PILING DATE: 1998-12-08

NUMBER OF SEQ ID NOS: 15

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 4

LINGTH: 15
                APPLICANT: Marteucci, Mark D.
TITLE OF INVENTION: Pyrimidine Derivatives For Labeled Binding Partners
FILE REFERENCE: GLISOLZ7
CURRENT APPLICATION UNMBER: US/09/400,502
CURRENT FILING DATE: 1999-09-21
PRIOR APPLICATION NUMBER: 08/966,392
PRIOR APPLICATION NUMBER: 08/966,392
PRIOR APPLICATION NUMBER: 08/966,392
SOUTH OR BOTE: 1997-11-07
NUMBER OF SEQ ID NOS: 25
SOFTWARE: Patentin version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ', OTHER INFORMATION: Description of Artificial Sequence: synthetic ; OTHER INFORMATION: probe, primer or target US-09-456-773-4

Sequence 137, Application US/09476387;
Sequence 137, Application US/09476387;
Patent No. 661438
GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Beadry, Amber
APPLICANT: Adamic, Jesenka Matulic
APPLICANT: Adamic, Jesenka Matulic
APPLICANT: Adamic, Jesenka Matulic
APPLICANT: Shawn
TITLE OF INVENTION: Nucleotide Triphosphate and their Incorporation into Oligonucle
TITLE OF INVENTION: Nucleotide Triphosphate and their Incorporation
TITLE OF INVENTION: Nucleotide Triphosphate
PRIOR FILING DATE: 1999-12-29
PRIOR PELION NUMBER: 09/41,432

APPLICANT: Sanghvi, Yogesh S
APPLICANT: Cook, Phillip D
APPLICANT: Ecker, David J
TITLE OF INVENTION: Antisense Inhibition of RAS Gene with Chimeric and
                Patent No. 6117848
GENERAL INFORMATION:
APPLICANT: Monia, B.P., Cowsert, L.M. and Mancharan, M.
TITLE OF INVENTION: Antisense Oligonuclectide
TITLE OF INVENTION: Inhibition of ras
NUMBER OF SEQUENCES: 55
CORRESPONDENCE ADDRESS:
ADDRESSE: Jane Massey Licata
STREET: 210 Lake Drive East, Suite 201

Sequence 681, Application US/09474432B

Sequence 681, Application US/09474432B

GENERAL INFORMATION:

APPLICANT: Beigelman, Leo

APPLICANT: Brigin, Alex

APPLICANT: Rarpeisky, Amber

APPLICANT: Arapeisky, Amber

APPLICANT: Arapeisky, Amber

APPLICANT: Arapeisky, Amber

APPLICANT: Arapeisky, Amber

APPLICANT: Sweedler, David

APPLICANT: When I Shawn

ITLE OF INVENTION: Nuclectide triphosphate and their incorporation into oligonuclec

CURRENT FILING TELENT DATE: 1999-12-19

PRIOR APPLICATION NUMBER: US 60/064,866

PRIOR FILING DATE: 1997-11-05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ## Sequence 31, Application US/09622166A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Patent No. 6143491
GENERAL INFORMATION:
APPLICANT: G1 CASMATION:
TITLE OF INVENTION: THERAPEUTIC COMPOSITIONS AND
TITLE OF INVENTION: DIAGNOSTIC ASSAYS FOR TYPE II DIABETES INVOLVING HNF-1
NUMBER OF SEQUENCES: 28
CORRESPONDENCE ADDRESS:
ADDRESSEE: FOLEY, HOAG & ELIOT LLP
STREET: One Post Office Square
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match 0.5%; Score 10.6; DB 1; Length 17; Best Local Similarity 76.5%; Pred. No. 5.7e+02; Matches 13; Conservative 0; Mismatches 4; Indels

                                                                                       STRANDEDNESS: double stranded
TOPOLOGY:
Intear
MOLECULE TYPE:
DESCRIPTION: retinoblastoma gene (Accession #
DESCRIPTION: m33647, J02394) muclectides 2236 to 2247
HYPOTHETICAL: NO
ANTI-SENS: NO
ORGANISM: Homo sapiens
POSITION IN GENOME:
CHROMOSOME; Chromosome 13
MAP POSITION: 1344.2
PUBLICATION INFORMATION:
AUTHORS: Friend, S. H. HOTOWILZ, J. M., Gerber, M.R., AUTHORS: Friend, S. H., HOTOWILZ, D. Li, F. P., Weinberg, AUTHORS: Rang X. F. Bogenmann, E. Li, F. P., Weinberg, AUTHORS: Rang X. R.

TELEFAX: (attorney) (212) 246-8959
INFORMATION POR SEQ ID NO: 189:
SEQUENCE CHARACTERISTICS:
LENGTH: 12 base pairs
TYPE: ancleic acid
STRANDEDNESS: double stranded
TOPOLOGY: linear
MOLECULE TYPE: genomic DNA
DESCRIPTION: hepatitis B virus adw2 isolate,
DESCRIPTION: nucleotides 2258 to 2269
HYPOTHETICAL: no
ORGANISM: Hepatitis B virus
INDIVIDUAL ISOLATE: adw2
NULDIVIDUAL ISOLATE: adw2
PUBLICATION INFORMATION: AUTHORS: Valenzuela, P, Quiroga, M, Zaldivar, J, AUTHORS: Gray, P, Ruter, W J.

```
TOPOLOGY: linear
MOLECULE TYPE: genomic DNA
HYPOTHETICAL: yes
ANTI-SENSE: no
ORGANISM: horse
ORGANISM: horse
STRAIN: Quarter Horse
TISSUB TYPE: myofiber
FEATURE:
NAME/KEY: sequence of horse sodium channel gene
CELL TYPE: myofiber
FEATURE:
NAME/KEY: paralysis
IDCATION: domain IV, region S3
IDENTIFICATION METHOD: cross-species RT-PCR using
IDENTIFICATION METHOD: previously described rat and human sequences
OTHER INFORMATION: complete horse sequence not
OTHER INFORMATION: down; corresponds to nucleotides of human sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 645

US-08-639-080-4

Sequence 4, Application US/08639080

Patent No. 584361

GENERAL INFORMATION:
APPLICANT: Rothemund, Paul W.K.
ITILE OF INVENTION: BASED MOLECULAR TURING MACHINE
ITILE OF INVENTION: BASED MOLECULAR TURING MACHINE
CORRESSEE: Fish & Richardson P.C.
STREET: 4225 Executive Square, Ste 1400

CITY: 1a Jolla
STATE: A
COUNTRY: USA
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA: 124, 1996
CLASSIFICATION NUMBER: US/08/639,080
FILING DATE: APALI 24, 1996
CLASSIFICATION NUMBER: 32,030
REPERRONCEDOCKET NUMBER: 32,030
RESTRANCATION NUMBER: 32,030
RESTRANCATION NUMBER: 32,030
RESTRANCATION NUMBER: 06618/129001
TELLEPAN: (619) 678-5099
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match 0.5%; Score 10.4; DB 1; Length 14; Best Local Similarity 91.7%; Pred. No. 3.9e+02; Matches 11; Conservative 0; Mismatches 1; Indels
APPLICATION NUMBER: JP 7-166541
FILING DATE: 30-JUN-1995
ATTORNEY/AGENT INPORMATION:
NAME: OBLON, NORMARION:
REGISTRATION NUMBER: 24,618
REFERENCE/DOCKET NUMBER: 10-810-0
TELECOMMUNICATION INFORMATION:
TELEX: 248855 OPAT UR
TELEX: 248855 OPAT UR
INFORMATION FOR SEQ ID NO: 10:
SEQUENCE CHARACTERISTICS:
LENGTH: 14 base pairs
TYPE: nucleic acid
STRANDEDNESS: double
TOPOLOGY: linear
MOLECULE TYPE: DNA (genomic)
HYPOTHATICAL: NO
ANTI-SENSE: NO
ORIGINAL SOURCE:
ORGANISM: Brevibacterium lactofermentum
US-08-674-168-10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MOLECULE TYPE: other nucleic acid
